

EXPLORING MEXICO

EXPLORATION AND DISCOVERY IN MEXICO

**PRISMO
METALS**

CSE:PRIZ | OTC:PMOMF

Los Pavitos

District scale in the
Alamos region, Sonora, Mexico,
5,289 Hectares

Palos Verdes

Copala-Panuco District, Sinaloa, Mexico
Adjacent to Vizsla Silver

Fully funded for exploration

- ▲ Au-Ag and Polymetallic Mineralization
- ▲ Low Sulfidation Epithermal Ag-Au Veins
- ▲ Possible Orogenic Gold

Palos Verdes

EPITHERMAL VIENS

- ▲ Exposed over 750 meters along strike
- ▲ High level exposure
- ▲ Little erosion
- ▲ Ore shoots preserved
- ▲ Strategic investment with Vizsla Silver
- ▲ Drilling of unexplored areas planned for 2023

HISTORIC DRILLING

- ▲ 3,130 meters in 18 HQ holes
- ▲ High grade Au-Ag intercepts below surface outcrops
- ▲ Defining ore shoot

Hole PV-18-02
2336 g/t Ag, 8.4 g/t Au
1.72% Pb 2.46% Zn
over 1.15 meters

Los Pavitos

EPITHERMAL OR OROGENIC GOLD?

- ▲ Possible southern extension of Caborca Orogenic Gold Belt
- ▲ A developing gold province in Mexico with 20+ Moz Au in production and resources

EXPLORATION IN PROGRESS

- ▲ Several structural trends defined
- ▲ Sampling shows high grade veins, several samples > 10 g/t Au
- ▲ LiDAR survey helping identify historic workings and accelerate work program
